ISO MAX

Profile insulation to the MAX

Our doors' thermal transmittance gets increased to a maximum level with the new "ISOMAX" technique.

The profile chambers get fully filled by polyurethane foam and, thus, provide maximum insulation.

The Ud value will get improved, since the profile is the particle with the most heat loss in door systems. In addition to the above, ISOMAX will provide improvements to the acoustic performance of the doors and, also, it will minimize potential vapor condensation, creating a more pleasant home environment.

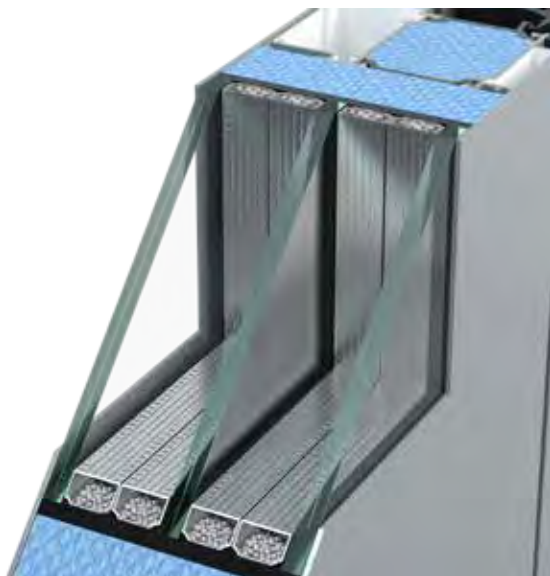

ISOMAX filling: maximum thermal insulation, maximum energy saving, maximum benefits.

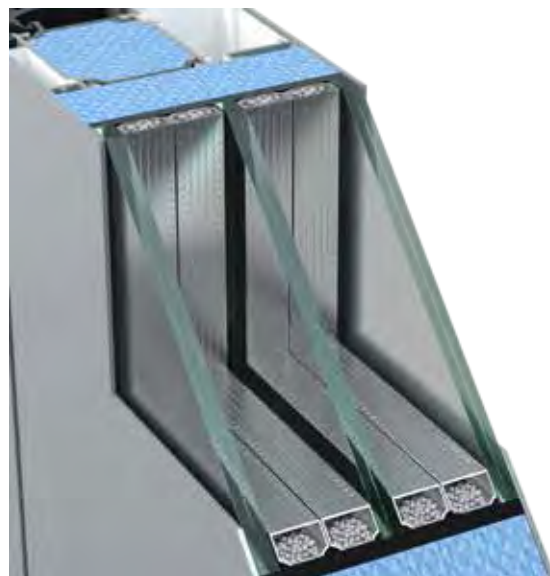

Triple - Triplex Glazed

ALL standard glasses are laminated
6 mm (3.3.1)

Optional

Plastic Spacer

The TGI-Spacer M designed to meet the numerous requirements which apply to the modern glass edge seal.

It is available in a range of variants specially matched to their individual intended use.

While some of the details of the designs may differ from each other, they all provide low Psi values, high productivity, high process reliability and high-quality appearance.

You can benefit from the following advantages:

- High profile stability due to patented steel wires
- Ideal for medium to large frames
- No readjustment of the frame
- Rigid corners

Extra Security Glazing

According EN 356 "Glass in building - Security Glazing"

P4A Three Glasses 4.4.4

- 4 mm glass externally
- 4 foil layers
- 4 mm glass internally

Approved for **RC2** Door Burglar Resistance

P5A Three Glasses 4.4.6

- 4 mm glass externally
- 6 foil layers
- 4 mm glass internally

Approved for **RC3** Door Burglar Resistance
